Project Initialization and Planning Phase

Date	29 September 2026
Team ID	SWTID-2026-8067
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand the customer's point of view. The statement focuses on the difficulty of controlling access to student records according to user roles and branch values, and the need for secure record-level access.

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A ServiceNow administrator managing student/institution records.	Securely control who can view, create, edit, and delete Institution Details records.	Different users have different access requirements, and unrestricted access could expose records from other branches.	The system needs role-based ACLs and a field-value check so that only authorized users can access the appropriate records.	Concerned about unauthorized access and data modification.

Problem Statement Summary

ServiceNow administrators need a secure way to restrict access to Institution Details records. Users with the required role should be able to access only permitted EEE branch records, while separate roles control Create, Write, and Delete operations. Administrators should retain full access.
