Team ID	SWTID-2026-8067
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand the ServiceNow administrator/user from four perspectives — what they Say, Think, Do, and Feel — in relation to the problem addressed by the project. This helps the team build a user-focused access-control solution.

SAYS • "Only authorized users should see the records." • "EEE users should not access ECE or CSE records." • "Administrators need full access."	**THINKS** • "How can I restrict records based on the Branch field?" • "Different operations need different roles." • "I need to verify that unauthorized users are blocked."	
DOES • Creates users, roles, tables and ACLs in ServiceNow. • Tests access by impersonating different users. • Checks Read, Create, Write and Delete permissions.	**PERSONA NAME** **ServiceNow Administrator** *(Role / User Type)*	**FEELS** • Concerned about unauthorized access. • Responsible for protecting student/institution records. • Confident when access rules are properly tested.

Empathy Map Summary: The ServiceNow administrator needs clear, role-based and record-level security so that users can access only the records and operations permitted to them, while administrators retain complete control.
