Technology Stack

Date	29 September 2026
Team ID	SWTID-2026-8067
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	2 Marks

Define Your Technology Stack:

The project is implemented primarily within the ServiceNow platform. The selected technologies support ACL configuration, server-side scripting, user/role management, record-level security, testing, and administration of the Institution Details table.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	ServiceNow Platform UI / Forms & Lists	Provides the interface for administrators and users to access the Institution Details table, forms, lists and ACL-controlled actions.
2	Backend / Server-Side	ServiceNow Server-Side JavaScript / Glide APIs	Used for ACL scripts and server-side security logic such as gs.hasRole() and current.getValue().
3	Database / Data Storage	ServiceNow Platform Database / Custom Table	Stores the u_institution_details records and fields such as Student Roll Number, Student Name, Faculty Name, Branch, Email, Phone Number and Description.
4	Cloud / Hosting / Deployment	ServiceNow Instance	The application, table, roles and ACL configuration run within the ServiceNow instance, avoiding separate application hosting for this lab.
5	Version Control & CI/CD	ServiceNow Update Sets	Update Sets can capture configuration changes such as tables, roles, ACLs and related customizations for controlled movement between instances.
6	Third-Party APIs / Other Tools	ServiceNow ACL, Impersonation & Security Admin tools	ACL configuration, security_admin elevation and impersonation are used to implement and verify role-based record access.
