Problem-Solution Fit

Date	29 September 2026
Team ID	SWTID-2026-8067
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

Use the framework below to ensure the proposed solution addresses the root causes, behaviors, limitations and access-control needs of the target users. The content is adapted to the ServiceNow Institution Details ACL project.

1. CUSTOMER SEGMENT(S) [CS]	**6. CUSTOMER LIMITATIONS [CL]**	**5. AVAILABLE SOLUTIONS PROS & CONS [AS]**
• ServiceNow administrators • Authorized EEE users • Institution/record managers	• Different users need different permissions • Manual filtering is not sufficient for security • Access must be controlled server-side	• Basic role ACLs — simple, but may not restrict individual branch records • Client-side filtering — convenient, but not sufficient as a security boundary • Script-controlled ACL — checks user role and record value
2. PROBLEMS / PAINS + ITS FREQUENCY [PR]	**9. PROBLEM ROOT / CAUSE [RC]**	**7. BEHAVIOR + ITS INTENSITY [BE]**
• Unauthorized visibility of records • Users may need access to EEE records only • CRUD permissions must differ by role Frequency: whenever users access or modify records	• Access requirements differ by role • Branch is a record-level security attribute • One broad permission can expose records beyond the user's scope	• Users open Institution Details records • They attempt Read/Create/Write/Delete operations • Administrators configure and test ACLs Intensity: high during access and security testing
3. TRIGGERS TO ACT [TR]	**10. YOUR SOLUTION [SL]**	**8. CHANNELS OF BEHAVIOR [CH]**
• Need to protect institution/student records • New user/role access request • Security testing or audit requirement	Script-controlled ACL solution: • bb1 → Read only permitted EEE records • bb2 → Create • bb3 → Write • bb4 → Delete • admin → full access	**ONLINE** • ServiceNow web UI • Lists and forms • Application Navigator **OFFLINE** • Admin/user requirement discussions • Lab testing and review
4. EMOTIONS BEFORE / AFTER [EM]		

Fit Summary: The proposed ACL design directly connects the security problem to role-based permissions and record-level Branch validation in ServiceNow.
