Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposed solution secures the ServiceNow Institution Details table using role-based and script-controlled ACLs. It addresses unauthorized record visibility and operation access by evaluating user roles together with the Branch value of the current record.

Project Overview	
Objective	Implement a secure ServiceNow ACL model that restricts record access by role and Branch value while allowing administrators full access.
Scope	Create the Institution Details table, users and roles, then configure and test Read, Create, Write and Delete ACLs.
Problem Statement	Users with different responsibilities require different levels of access. Unrestricted access can expose EEE, ECE or CSE records to unauthorized users.
Impact	A controlled ACL model reduces unauthorized viewing, creation, modification and deletion of Institution Details records and makes permissions easier to test and manage.
Proposed Solution	Use script-controlled Read access for EEE records and separate role-based ACLs for Create, Write and Delete operations.
Approach	Create roles bb1, bb2, bb3 and bb4. The Read ACL checks admin status, bb1 role and current Branch = EEE. Additional ACLs use bb2 for Create, bb3 for Write and bb4 for Delete.
Key Features	• Role-based authorization • Record-level Branch restriction • Administrator full access • Separate CRUD permissions • Impersonation-based verification

ACL Permission Model

Operation	**Role**	**Access Rule**
Read	bb1	Can read only records where Branch = EEE. Administrator is allowed full access.
Create	bb2	Allows creation of Institution Details records when the required role is present.
Write	bb3	Allows editing of records when the required role is present; Read ACL still governs record visibility.
Delete	bb4	Allows deletion when the required role is present; Read/Write security remains relevant to record access.
Full Access	admin	Administrator retains unrestricted access to the table.

Resource Requirements

Resource Type	**Description**	**Specification / Allocation**
Platform	Application platform	ServiceNow instance
Data	Custom record storage	u_institution_details table
Security	Roles and ACLs	admin, bb1, bb2, bb3, bb4
Testing	User access verification	Impersonation of authorized/unauthorized users
