Code-Layout, Readability and Reusability

Date	29 September 2026
Team ID	SWTID-2026-8067
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	5 Marks

Code-Layout, Readability and Reusability:

This document evaluates the ACL solution in terms of structure, readability and reusability. The implementation separates CRUD permissions and uses a focused server-side access script.

Code Layout Checklist:

S.No	Code Quality Parameter	Description	Followed	Remarks
1	Consistent Indentation	Uniform spacing used throughout the script.	Yes	Consistent ACL script formatting.
2	Proper File Structure	Access rules are separated into individual ACL records.	Yes	Separate Read/Create/Write/Delete ACLs.
3	Meaningful Variable Names	Variables and platform APIs reflect their purpose.	Yes	current, gs.hasRole and branch are clear.
4	Function / Method Names	Methods are descriptively named.	Yes	hasRole() and getValue().
5	Code Comments	Comments explain the main access decisions.	Yes	Admin, role and Branch checks are identified.
6	Modular Design	Security logic is split by operation.	Yes	Each CRUD operation has its own ACL.
7	No Redundant Code	The READ script contains only required checks.	Yes	Short sequential authorization flow.
8	Error Handling	Access decisions explicitly return allow/deny.	Partial	No exception handling is specified for this simple ACL script.

Reusable Components / Modules:

S.No	Component / Module Name	Language / Technology	Where Reused	Reusability Level
1	READ ACL authorization pattern	ServiceNow ACL + JavaScript	Other tables with field-value access rules.	High
2	Role-based CRUD ACL pattern	ServiceNow ACL / Roles	Other tables needing separate CRUD permissions.	High
3	Impersonation verification	ServiceNow Administration	Testing access controls for other users/tables.	High
4	Branch/choice-field restriction	ServiceNow field + ACL script	Can adapt to department, region or category.	High
5	Institution Details table model	ServiceNow custom table	Similar institution/student record labs.	Medium

Overall Code Quality Assessment:

Aspect	Rating (1-5)	Comments
Code Layout & Structure	4	ACLs are separated by operation and the READ script follows a clear sequence.
Readability	4	Role and Branch checks are straightforward and commented.
Reusability	5	Role-based CRUD and field-value ACL patterns can be adapted to other tables.
Documentation / Comments	4	Core access decisions are documented in the script and project steps.
Overall Score	4.25 / 5	Based on the documented implementation; repository evidence was not provided.
