Coding & Solution

Date	29 September 2026
Team ID	SWTID-2026-8067
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	5 Marks

Coding & Solution

This section documents the implemented ServiceNow ACL solution. It uses ServiceNow configuration and server-side JavaScript to enforce role-based and record-level access.

Solution Summary

Field	Details
Repository Link / URL	Not provided in the project content.
Programming Language(s)	JavaScript — ServiceNow server-side scripting
Framework(s) Used	ServiceNow platform, ACL engine and Glide APIs
Key Features Implemented	User/role setup; custom table; script-controlled READ ACL; CREATE, WRITE and DELETE ACLs; admin access; impersonation testing.
Pending / Incomplete Features	No pending feature is specified in the project content.
Setup / Run Instructions	Create user and roles → create u_institution_details → add test records → elevate security_admin → create ACLs → impersonate users → verify permissions.

Core READ ACL Script

```
(function () {
if (gs.hasRole('admin')) {
return true;
}
if (!gs.hasRole('bb1')) {
return false;
}
if (current.getValue('branch') == 'EEE') {
return true;
}
return false;
})();
```

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	N/A for simple ACL decision logic
5	The application runs without critical errors	To be verified in instance
6	Code is committed to a version control repository	Not specified
