Project Executable Files

Date	29 September 2026
Team ID	SWTID-2026-8067
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	3 Marks

Project Executable Files

For this ServiceNow lab, the deliverable is primarily a configured ServiceNow application/table and its ACL configuration rather than a standalone APK or desktop executable. The checklist below records which submission items apply to the project.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted	Project-specific Note
1	Complete source code (all files and folders)	NA	ServiceNow configuration is the main deliverable; the READ ACL script is documented.
2	README / Setup Guide	Yes	Run/setup instructions are included in this document.
3	requirements.txt / package.json / dependency file	NA	No local application dependency file is required for the ServiceNow lab.
4	Database schema / seed files	NA	The schema is created directly as the u_institution_details ServiceNow custom table; test records are created in the instance.
5	Environment configuration file	NA	No external application .env file is required for this ACL lab.
6	Deployed application URL	NA	No separate hosted web application URL is specified.
7	APK / Executable binary	NA	Not applicable to a ServiceNow configuration lab.
8	Dockerfile / Containerization config	NA	Not specified or required.
9	Test files and test results	Yes	ACL verification is performed through impersonation and list/form checks; performance evidence is separate.
10	Demo video / walkthrough	NA	Not provided in the project content.

Step 2: File / Folder Structure

The project is configured inside a ServiceNow instance. The logical structure for the deliverable is:

```
ServiceNow Instance
■
■■■ User Administration
■  ■■■ EEE User
■  ■■■ Roles
■  ■■■ bb1 → READ
■  ■■■ bb2 → CREATE
■  ■■■ bb3 → WRITE
■  ■■■ bb4 → DELETE
■
■■■ System Definition
■  ■■■ Tables
■  ■■■ u_institution_details
■  ■■■ Student Roll Number
■  ■■■ Student Name
■  ■■■ Faculty Name
■  ■■■ Branch
■  ■■■ Email
■  ■■■ Phone Number
■  ■■■ Description
■
■■■ System Security
■■■ Access Control (ACL)
■■■ READ → script + Branch = EEE
■■■ CREATE → bb2
■■■ WRITE → bb3
■■■ DELETE → bb4
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	ServiceNow instance URL — not supplied in the project content.
Login Credentials (Demo)	Admin / EEE User credentials are managed in the ServiceNow instance and are not included in this document.
Platform / Hosting Provider	ServiceNow instance / training environment.

Field	Details
Repository Link	Not provided.
Demo Video Link	Not provided.

Step 4: Run Instructions

Pre-requisites

• ServiceNow instance with admin access.

• Ability to elevate to security_admin.

• Permission to create users, roles, tables, fields and ACLs.

1. Log in to the ServiceNow instance with admin access.

2. Create the EEE User through User Administration → Users.

3. Create roles bb1, bb2, bb3 and bb4 and assign them to the test user.

4. Create u_institution_details under System Definition → Tables.

5. Add the required fields and create test records using EEE, ECE and CSE branch values.

6. Elevate to security_admin and create the READ ACL with the documented script.

7. Create CREATE, WRITE and DELETE ACLs requiring bb2, bb3 and bb4 respectively.

8. Impersonate users and verify READ, CREATE, WRITE and DELETE behavior.

9. Impersonate an administrator and verify full access.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	No standalone executable file exists for this ServiceNow configuration lab.	NA — configuration is executed within the ServiceNow instance.
2	ServiceNow instance URL and credentials were not supplied in the project content.	Add evaluator access details before final submission.
3	Actual screenshots/evidence and repository/demo links are not supplied here.	Attach the relevant ServiceNow screenshots and links if required by the evaluator.
